Saad Akram

Playable Ads Developer | Unity + Luna Playworks & HTML5/JS

Lahore, Pakistan (UTC+5) · +92 316 6644676 · saad.akram128@gmail.com · linkedin.com/in/saadakram-dev · Available for freelance

Summary

Playable ads developer who builds ads that pass network review the first time. 4+ years in game development at Game District, with 10+ shipped hyper-casual titles, and now focused full-time on playable ads.

I work in two pipelines: Unity → Luna Playworks exports, and hand-coded, single-file HTML5 playables in vanilla JS and Three.js when Luna isn't the right fit. I ship to AppLovin, Google Ads, TikTok/Pangle, Mintegral, Meta and Unity Ads, and handle the hard parts: build size, Luna converter quirks, WebGL rendering bugs and multi-variant A/B setups.

Skills

- **Playable ads:** Unity Luna Playworks, MRAID, multi-network export, sub-5 MB single-file builds, remote-config A/B variants, AppLovin Playable Analytics
- **Engines & languages:** Unity, C#, URP, DOTween, JavaScript, HTML5 Canvas, Three.js / WebGL, Spine WebGL, Web Audio API
- **Ad networks:** AppLovin, Google Ads, TikTok/Pangle, Mintegral, Meta, Unity Ads
- **Tools:** Rider, Claude Code

Experience

Playable Ads Developer · Game District, Lahore · Sep 2025 – Present

- Own the full Unity → Luna Playworks pipeline: URP compatibility, build size optimization and network-specific exports.
- Ship playable ads across AppLovin, Google Ads, TikTok/Pangle, Mintegral, Meta and Unity Ads as part of the creatives team.
- Built standalone HTML5 playable builder tools (vanilla JS + Three.js) that export single-file, MRAID-compliant playables under 5 MB.

- Implemented remote-config driven multi-variant playables for A/B testing CTAs and difficulty.
- First on the team to integrate AppLovin Playable Analytics into Luna builds, and presented the results to management.

Freelance Playable Ads Developer · Remote · 2026

- Built a playable ad for a mobile game studio in China, matching their reference HTML from the source code and requirements they provided.
- Delivered the final HTML build and full source project; source approved by the client's technical team on first delivery.

Unity Developer · Game District, Lahore · Apr 2022 – Aug 2025

- Shipped 10+ hyper-casual mobile titles in Unity and C#.
- Built gameplay mechanics, UI and animations (DOTween) for casual and hyper-casual games.
